

# Ecological site R226XY058AK Rocky Shrub Tundra (Upland) (AK653 St Paul Island)

Accessed: 05/13/2025

### **General information**

**Provisional**. A provisional ecological site description has undergone quality control and quality assurance review. It contains a working state and transition model and enough information to identify the ecological site.

Table 1.	Dominant	plant	species
----------	----------	-------	---------

Tree	Not specified
Shrub	Not specified
Herbaceous	Not specified

### **Physiographic features**

Occurs on gently sloping rocky inland areas. This site is similar to, and frequently associated with Dwarf Shrub Tundra (Upland) site. Rock outcroppings are interspersed throughout the site.

#### Table 2. Representative physiographic features

Landforms	(1) Hill
Elevation	37–152 m
Slope	1–10%

### **Climatic features**

#### Table 3. Representative climatic features

Frost-free period (average)	120 days
Freeze-free period (average)	100 days
Precipitation total (average)	610 mm

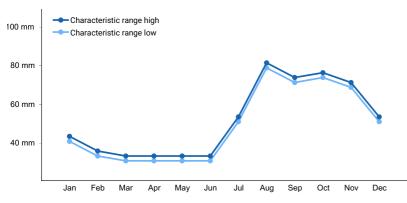

Figure 1. Monthly precipitation range

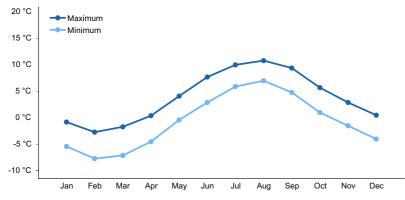

Figure 2. Monthly average minimum and maximum temperature

# Influencing water features

### **Soil features**

Soils are shallow to moderately deep and moderately well to well drained. Soils are stony and cobbly and medium textured. Soil pH is slightly acid. Runoff is very low and permeability is moderately rapid.

Surface texture	<ul><li>(1) Extremely stony silt loam</li><li>(2) Cobbly</li></ul>
Family particle size	(1) Loamy
Drainage class	Moderately well drained to well drained
Permeability class	Moderately rapid
Soil depth	25–102 cm
Surface fragment cover <=3"	0%
Surface fragment cover >3"	0%
Available water capacity (0-101.6cm)	10.67–11.18 cm
Calcium carbonate equivalent (0-101.6cm)	0%
Electrical conductivity (0-101.6cm)	0 mmhos/cm
Sodium adsorption ratio (0-101.6cm)	0
Soil reaction (1:1 water) (0-101.6cm)	6.1–6.5
Subsurface fragment volume <=3" (Depth not specified)	0%
Subsurface fragment volume >3" (Depth not specified)	0%

#### Table 4. Representative soil features

## **Ecological dynamics**

State and transition model

#### Ecosystem states

1. Salix arctica/Achillea
borealis

#### State 1 submodel, plant communities

1.1. Salix arctica/Achillea
borealis

# State 1 Salix arctica/Achillea borealis

## Community 1.1 Salix arctica/Achillea borealis

Shrubs make up about 40% of the composition, forbs about 45% and grasses and sedges about 15% of the composition. Total annual vascular herbage production is1800 pounds/acre. Total live lichen biomass is 5000 pounds/acre.

### Additional community tables

Table 5. Community 1.1 plant community composition

Group	Common Name	Symbol	Scientific Name	Annual Production (Kg/Hectare)	Foliar Cover (%)
Shrub	/Vine				
1				616–673	
	northern willow	SAAR6	Salix arctophila	415–426	_
	black crowberry	EMNI	Empetrum nigrum	95–112	-
	arctic willow	SAAR27	Salix arctica	101–112	_
Grass	/Grasslike				
1				336–359	
	showy sedge	CASP5	Carex spectabilis	106–118	_
	alpine timothy	PHAL2	Phleum alpinum	101–112	_
	Bering Sea sedge	CAMIN	Carex microchaeta ssp. nesophila	50–62	_
	spike trisetum	TRSP2	Trisetum spicatum	28–39	_
	arctic bluegrass	POARA2	Poa arctica ssp. arctica	6–17	_
	bluegrass	POA	Poa	0–11	_
	red fescue	FERU2	Festuca rubra	2–11	_
	polargrass	ARCTA	Arctagrostis	6–11	_
	common woodrush	LUMU2	Luzula multiflora	2–9	_
	American dunegrass	LEMOM2	Leymus mollis ssp. mollis	0–6	_
Forb					
1				1009–1121	
	boreal yarrow	ACMIB	Achillea millefolium var. borealis	359–370	_

	Nootka lupine	LUNO	Lupinus nootkatensis	185–196	_
	seacoast angelica	ANLU	Angelica lucida	112–140	_
	Bering chickweed	CEBE2	Cerastium beeringianum	67–84	_
	Pacific hemlockparsley	COGM	Conioselinum gmelinii	22–28	_
	field horsetail	EQAR	Equisetum arvense	17–28	_
	Macoun's poppy	PAMA5	Papaver macounii	11–22	-
	boreal draba	DRBO	Draba borealis	11–22	-
	sweetflower rockjasmine	ANCH	Androsace chamaejasme	6–17	_
	larkspurleaf monkshood	ACDE2	Aconitum delphiniifolium	6–17	-
	Tilesius' wormwood	ARTI	Artemisia tilesii	6–17	-
	field sagewort	ARCAB4	Artemisia campestris ssp. borealis var. borealis	0–11	-
	Hornemann's willowherb	EPHOB	Epilobium hornemannii ssp. behringianum	0–11	_
	captiate valerian	VACA3	Valeriana capitata	0–11	-
	cloudberry	RUCH	Rubus chamaemorus	3–9	-
	northern starwort	STCA	Stellaria calycantha	0–6	-
	starwort	STELL	Stellaria	0–6	-
	Aleutian violet	VILA6	Viola langsdorffii	0–6	-
	whorled lousewort	PEVE	Pedicularis verticillata	0–6	-
	tall Jacob's-ladder	POAC	Polemonium acutiflorum	0–6	_
	arctic raspberry	RUARS	Rubus arcticus ssp. stellatus	0–6	_
	mountain harebell	CALA7	Campanula lasiocarpa	0–6	-
	boreal sagebrush	ARAR9	Artemisia arctica	0–6	-
	Danish scurvygrass	COGR6	Cochlearia groenlandica	_	-
Liche	n				
1				0–6	
	whiteworm lichen	THAMN3	Thamnolia	0–6	_

# **Animal community**

This is a winter high-value grazing site for reindeer. Salix spp. growing on this site is high forage and preference value during winter and winter-spring months. Reindeer will tend to concentrate on this site which is very sensitive to grazing. Herders need to use caution when moving reindeer through these areas. Herding techniques need to be subtle because crowding the reindeer and causing them to mill may result in hoof injuries and broken legs.

# Rangeland health reference sheet

Interpreting Indicators of Rangeland Health is a qualitative assessment protocol used to determine ecosystem condition based on benchmark characteristics described in the Reference Sheet. A suite of 17 (or more) indicators are typically considered in an assessment. The ecological site(s) representative of an assessment location must be known prior to applying the protocol and must be verified based on soils and climate. Current plant community cannot be used to identify the ecological site.

Composition (Indicators 10 and 12) based on	Annual Production

### Indicators

- 1. Number and extent of rills:
- 2. Presence of water flow patterns:
- 3. Number and height of erosional pedestals or terracettes:
- 4. Bare ground from Ecological Site Description or other studies (rock, litter, lichen, moss, plant canopy are not bare ground):
- 5. Number of gullies and erosion associated with gullies:
- 6. Extent of wind scoured, blowouts and/or depositional areas:
- 7. Amount of litter movement (describe size and distance expected to travel):
- 8. Soil surface (top few mm) resistance to erosion (stability values are averages most sites will show a range of values):
- 9. Soil surface structure and SOM content (include type of structure and A-horizon color and thickness):
- 10. Effect of community phase composition (relative proportion of different functional groups) and spatial distribution on infiltration and runoff:
- 11. Presence and thickness of compaction layer (usually none; describe soil profile features which may be mistaken for compaction on this site):

12. Functional/Structural Groups (list in order of descending dominance by above-ground annual-production or live foliar cover using symbols: >>, >, = to indicate much greater than, greater than, and equal to):

Dominant:

Sub-dominant:

Other:

Additional:

- 13. Amount of plant mortality and decadence (include which functional groups are expected to show mortality or decadence):
- 14. Average percent litter cover (%) and depth ( in):
- 15. Expected annual annual-production (this is TOTAL above-ground annual-production, not just forage annualproduction):
- 16. Potential invasive (including noxious) species (native and non-native). List species which BOTH characterize degraded states and have the potential to become a dominant or co-dominant species on the ecological site if their future establishment and growth is not actively controlled by management interventions. Species that become dominant for only one to several years (e.g., short-term response to drought or wildfire) are not invasive plants. Note that unlike other indicators, we are describing what is NOT expected in the reference state for the ecological site:
- 17. Perennial plant reproductive capability:
